In the summer of 2024, the administration of Marshall County Schools released a professional development catalog containing the details of all summer trainings including who is eligible, deadlines and how to register. We had overwhelmingly positive feedback from this; therefore, we are doing the same for the fall.

Each page in this document describes a professional development opportunity, timelines, compensation, criteria to be eligible to register, and directions on how to register. Not every training is for every employee. The qualifications for eligibility of each training are listed.

It is not mandatory for any training to be completed for stipend pay; these are simply opportunities for personal growth that will positively impact student performance. **If a training is mandatory per state code, anyone who does not complete the training for pay will simply have to complete that training during a designated professional development day built into the school calendar.**

If you are earning a stipend for training, the work must be completed outside of your contracted work hours.

Dyscalculia is slowly getting more attention in the world of education. One can assume that as the science of reading gains more and more traction, people have started to wonder about math as well. While dyslexia is being studied extensively, the same cannot be said for dyscalculia even though there are some estimates that the prevalence rates are nearly identical for both disorders. This course is an introduction into dyscalculia which is also known as a specific learning disability in math. The information in this course will inform participants on what dyscalculia is and is not, the need for screenings and early interventions, connections between foundational numeracy skills and dyslexia, and when special education services may be appropriate. Knowledge gained through this course is to help guide educational practices within the school system and is **not** to be utilized for diagnostic purposes. Our hope is that this course will empower your teaching practices for students struggling in math.

This will be an interactive, in-person session on September 3rd at JMHS from 4-6pm. To sign up, scan the barcode below. All registrations to participate must be completed before August 15, 2024.

The "PRACTICE" in Ready4Reading is the Short Reads Decodables module.

Students practice the discrete phonics skills they are learning with 90 two-sided text cards that incrementally target individual sound spellings. These include a wealth of culturally relevant texts that are less intimidating than full print books. With more than 75% decodable texts, these two-sided cards give students a safe place to practice newly taught phonics skills. They:

- review phonics
- work with words
- and apply decoding and comprehension strategies.

INCLUDES:

Print materials:

- 9 teacher's guides
- 90 student cards (6 copies each)

Online teacher resources:

- Short Reads Decodables student cards
- Teacher's guide
- Formative assessment rubrics
- Digital Reading Experience Bookshelf with printable and e-book student card

Professional Personnel: \$60.00 Per Session

Service Personnel: \$42.00 Per Session

What Is the Science of Reading?

What do we mean when we say science of reading? The science of reading is not a program, and it is not a couple of research studies highlighting favorable outcomes.

It is the body of scientific research over the last several decades that proves how the brain learns to become a skilled reader and writer. When we say something is aligned with the science of reading, we mean that it is aligned with the research that has proven to be effective.
